Outline

1 Data processing pipeline

2 Stemming

3 Dealing with phrases

4 Zipf's and Heaps' laws

5 Summary

Outline

1 Data processing pipeline

2 Stemming

3 Dealing with phrases

4 Zipf's and Heaps' laws

5 Summary

Data processing pipeline

- ① Remove white-spaces and punctuation
- ② Convert terms to lower-case
- ③ Remove stop-words
- ④ Convert terms to their stems
- ⑤ Deal with phrases
- ⑥ Apply language-specific processing rules

Example

- ① To prepare a text for indexing, one needs to split it into tokens, remove stop-words and perform stemming.
- ② to prepare a text for indexing one needs to split it into tokens remove stop words and perform stemming
- ③ prepare indexing needs split
tokens remove stop perform stemming
- ④ prepar index need split
token remov stop perform stem

Stop-word removal

- Frequency-based
 - Set a frequency threshold f
 - Remove words with the frequency higher than f
- Dictionary-based
 - Create a dictionary of stop-words
 - Remove words that occur in this dictionary

Outline

1 Data processing pipeline

2 Stemming

3 Dealing with phrases

4 Zipf's and Heaps' laws

5 Summary

Stemming

- ① Algorithmic
- ② Dictionary-based
- ③ Hybrid

Algorithmic stemming (Porter stemmer)

Step 1a:

- Replace **sses** by **ss** (e.g., **stresses** → **stress**).
- Delete **s** if the preceding word part contains a vowel not immediately before the **s** (e.g., **gaps** → **gap** but **gas** → **gas**).
- Replace **ied** or **ies** by **i** if preceded by more than one letter, otherwise by **ie** (e.g., **ties** → **tie**, **cries** → **cri**).
- If suffix is **us** or **ss** do nothing (e.g., **stress** → **stress**).

Step 1b:

- Replace **eed**, **eedly** by **ee** if it is in the part of the word after the first non-vowel following a vowel (e.g., **agreed** → **agree**, **feed** → **feed**).
- Delete **ed**, **edly**, **ing**, **ingly** if the preceding word part contains a vowel, and then if the word ends in **at**, **bl**, or **iz** add **e** (e.g., **fished** → **fish**, **pirating** → **pirate**), or if the word ends with a double letter that is not **ll**, **ss** or **zz**, remove the last letter (e.g., **falling** → **fall**, **dripping** → **drip**), or if the word is short, add **e** (e.g., **hoping** → **hope**).
- Whew!

Croft et al., "Search Engines, Information Retrieval in Practice"

Dictionary-based stemming

- Store lists of related words in a dictionary
- Can recognize the relation between “is”, “be”, “was”
- New-words problem

Hybrid stemming (Krovetz stemmer)

- Approach
 - ① Check the word in a dictionary
 - ② If present, either leave it as is
 - ③ If not present, check for suffixes that could be removed
 - ④ After removal, check the dictionary again
- Produces words not stems
- Comparable effectiveness with the Porter stemmer

Stemming example

Original text:

Document will describe marketing strategies carried out by U.S. companies for their agricultural chemicals, report predictions for market share of such chemicals, or report market statistics for agrochemicals, pesticide, herbicide, fungicide, insecticide, fertilizer, predicted sales, market share, stimulate demand, price cut, volume of sales.

Porter stemmer:

document describ market strategi carri compani agricultur chemic report predict market share chemic report market statist agrochem pesticid herbicid fungicid insecticid fertil predict sale market share stimul demand price cut volum sale

Krovetz stemmer:

document describe marketing strategy carry company agriculture chemical report prediction market share chemical report market statistic agrochemic pesticide herbicide fungicide insecticide fertilizer predict sale stimulate demand price cut volume sale

Croft et al., "Search Engines, Information Retrieval in Practice"

Outline

1 Data processing pipeline

2 Stemming

3 Dealing with phrases

4 Zipf's and Heaps' laws

5 Summary

Example

To be or not to be...

Dealing with phrases

- ① Detect **noun phrases** using a part-of-speech tagger
 - sequences of nouns
 - adjectives followed by nouns
- ② Detect phrases at the query processing time
 - Use an index with word positions
 - Will be discussed next
- ③ Use frequent **n-grams**, e.g., bigrams and trigrams

Example noun phrases

TREC data		Patent data	
Frequency	Phrase	Frequency	Phrase

Croft et al., "Search Engines, Information Retrieval in Practice"

Heaps' law

$$\text{vocab} = \text{const} \cdot \text{words}^{\beta}$$

Croft et al., "Search Engines, Information Retrieval in Practice"

Outline

1 Data processing pipeline

2 Stemming

3 Dealing with phrases

4 Zipf's and Heaps' laws

5 Summary

Data processing summary

- Stop-word removal
- Stemming
 - Algorithmic (Porter stemmer)
 - Dictionary-based
 - Hybrid (Krovetz stemmer)
- Dealing with phrases
- Zipf's and Heaps' laws

Materials

- Croft et al., Chapter 4
- Manning et al., Chapter 2.2
